Defense Programs and Budget of Japan

Overview of FY2016 Budget

Defense Programs and Budget of Japan
## Concept of FY2016 Budget

### I Effective deterrence and response to various situations

1. Ensuring security of seas and airspace surrounding Japan
2. Respond to attacks on remote islands

   - Develop continuous surveillance capabilities
   - Ensure and maintain air superiority
   - Ensure and maintain maritime supremacy
   - Enhance rapid deployment and response capabilities
   - Strengthen the infrastructure for C3I capabilities

3. Respond to ballistic missile attacks

   - Respond to ballistic missile attacks
   - Enhancement of air and missile defense
   - Respond to attacks by guerillas and special operations forces

4. Response in outer space

5. Response in cyberspace

6. Respond to large-scale disasters

   - Maintenance/enhancement of function of military camps/bases to serve as hubs for disaster response
   - Implementation of exercises, etc. to respond to large-scale and unconventional disasters
   - Acquisition, etc. of equipment contributing to disaster response

7. Strengthen intelligence capabilities

### II Support stabilization of the Asia-Pacific region and improvement of the global security environment

1. Measures to stabilize the Asia-Pacific Region
2. Appropriately respond to improve global security environments

### III Strengthen Japan-U.S. alliance

1. Measures for mitigating the impact on local communities
2. SACO-related cost

### IV Measures concerning personnel and education

1. Promote measures to secure high-quality human resources in charge of national defense
2. Promote measures to support further engagement of female personnel
3. Personnel management system reform

### V Streamlining initiatives

1. Procurement of equipment, etc. and services using long-term contracts
2. Review maintenance methods
3. Bulk procurement of equipment
4. Use of civilian goods and review of specifications

### VI Others

1. Restructuring and organizational quota changes
2. Promote measures for SDF bases
3. Strengthen education and research systems
4. Strengthen health functions
5. Promote research and development

Major equipment

Defense-related expenditures

Reference (FY2015 Supplementary Budget)
## Concept of FY 2016 Budget

1. Japan will steadily improve its defense capabilities during FY2016, as the third fiscal year of this effort, in order to develop a Dynamic Joint Defense Force according to the “National Defense Program Guidelines for FY2014 and beyond” (approved by the Cabinet on December 17, 2013) and the “Medium Term Defense Program (FY2014-FY2018)” (approved by the Cabinet on December 17, 2013).

2. Japan will build up its defense capabilities while focusing on the further enhancement of joint functions in order to seamlessly and dynamically fulfill its defense responsibilities, which include providing an effective deterrence and response to a variety of security situations, supporting stability in the Asia-Pacific region, as well as improving the global security environment. Japan will place particular emphasis on the following measures: intelligence, surveillance, and reconnaissance (ISR) capabilities; intelligence capabilities; transport capabilities; command, control, communication, intelligence (C3I) capabilities; response to attacks on remote islands; response to ballistic missile attacks; response in outer space and cyberspace threats; response to large-scale disasters, etc.; and international peace cooperation efforts, etc.

3. In light of the increasing severe fiscal situations, Japan will further promote efforts to achieve greater efficiency and streamlining that is in harmony with other national policies through initiatives such as long-term contracts.
Effective deterrence and response to various situations

In order to provide effective deterrence and response to a variety of security situations, Japan will build up necessary defense capabilities to ensure security of the seas and airspace surrounding Japan, respond to attacks on remote islands, respond to ballistic missile attacks, respond to outer space and cyberspace threats, respond to large-scale disasters, and strengthen intelligence capabilities.

1. Ensuring security of seas and airspace surrounding Japan

Carry out continuous surveillance across wide areas and strengthen intelligence, warning and surveillance capabilities in the seas and airspace surrounding Japan, in order to enable early detection of various warning signs.

- Capability improvement for fixed-wing patrol aircraft (P-3C) (¥1.2 billion)
  Acquire devices necessary to improve capabilities of radars and implement upgrade in order to improve the detection/discernment capabilities of fixed-wing patrol aircraft (P-3C).

- Life extension of fixed-wing patrol aircraft (P-3C) (3 aircraft: ¥1.1 billion)
  Implement life extension measures for P-3C to maintain the number of fixed-wing patrol aircraft.

- Acquisition of patrol helicopters (SH-60K) (17 helicopters: ¥102.6 billion)
  • Acquire patrol helicopter SH-60K with improved capability to detect submarines and increased attack capabilities to succeed the existing MSDF patrol helicopter SH-60J.
  • Steadily procure 17 SH-60K by bulk procurement through a long-term contract, and reduce procurement cost.

- Life extension of patrol helicopters (SH-60J) (2 helicopters: ¥1.0 billion)
  Implement life extension measures for SH-60J to maintain the number of patrol helicopters.
○ Development of new patrol helicopters (¥24.4 billion)
  Develop patrol helicopters with capabilities to detect submarines by coordinating with multiple
  helicopters in order to ensure superiority in anti-submarine operations in the seas surrounding
  Japan, including shallow seas.

○ Acquisition of new airborne early-warning aircraft (E-2D)
  (1 aircraft: ¥26.0 billion)
  Acquire new airborne early-warning aircraft to enhance the
  warning and surveillance capabilities in the surrounding
  airspace, including the southwestern region.

○ Improvement of the capability of Airborne Warning And
  Control System (AWACS) (E-767) (¥6.1 billion)
  Acquire part of the components necessary for the conversion
  of central computing devices and installation of electronic
  warfare support measures in order to improve the warning
  and surveillance capabilities of the existing E-767.

○ Acquisition of part of Unmanned Aerial Vehicle (Global Hawk) System
  (¥14.6 billion)
  • Acquire airframe components (for 3 UAVs), etc. continuing from
    FY2015 for UAVs (Global Hawk) in order to enhance persistent
    wide-area ISR capabilities.
  • Strengthen preparation and readiness for the introduction of UAVs.

*The FY2015 budget was used to acquire airframe components with
  a long acquisition period and ground system for remote control
  operation.
Effective deterrence and response to various situations

○ Construction of an Aegis-equipped destroyer (DDG) (1 destroyer: ¥173.4 billion)
Construct an Aegis-equipped destroyer to comprehensively improve Japan’s capability to respond to ballistic missiles and strengthen the posture to protect Japan in multi-layered and sustained manners.

○ Life extension of destroyers (parts procurement for 5 destroyers: ¥1.6 billion)
Acquire parts to implement life extension measures for Asagiri-class (3 destroyers), Hatakaze-class (1 destroyer), and Kongo-class (1 destroyer) to maintain the number of destroyers.

○ Construction of a submarine (1 submarine: ¥63.6 billion)
  • Construct the 12th Soryu-class submarine (2,900 t class) to increase the number of submarines from the current 16 to 22.
  • Continue improvement of underwater endurance, etc. compared with the existing Soryu-class submarines by mounting lithium-ion batteries.

○ Life extension of submarines (life extension work for 4 submarines and parts procurement for 4 submarines: ¥3.0 billion)
Implement life extension measures for Oyashio-class submarines in order to increase the number of submarines from the current 16 to 22.

○ Participation in U.S. UAV response exercise (Black Dart)
Participate in a UAV response exercise (Black Dart) in the United States to enhance the SDF’s capability to respond to UAVs.
2. Respond to attacks on remote islands

In order to respond to attacks on remote islands, the MOD will develop continuous surveillance capabilities, ensure and maintain air superiority and maritime supremacy, enhance rapid deployment and response capabilities such as transportation and amphibious operation capabilities, and strengthen the infrastructure for C3I capabilities.

(1) Develop continuous surveillance capabilities

- Development of facilities for the coast observation unit on Yonaguni Island (¥5.5 billion)

- Acquisition of new airborne early-warning aircraft (E-2D) (repost)

- Establishment of foundation for deploying mobile warning and control radar in the southwestern region (¥300 million)
  Maintain seamless warning and surveillance posture by establishing foundation for deploying mobile warning and control radar in Amami-Oshima.

- Conversion of fixed warning and control radar (FPS-7) and addition of functions for BMD response (¥600 million)
  Allocate cost of building facilities necessary to install fixed warning and control radar (FPS-7) on Unishima Island (Nagasaki Prefecture).

- Examination of the desirable air defense posture in remote islands in the Pacific (¥50 million)
  Conduct studies to promote the examination of the desirable air defense posture in remote islands in the Pacific.

- Acquisition of part of Unmanned Aerial Vehicle (Global Hawk) System (repost)

(2) Ensure and maintain air superiority

- Acquisition of fighter aircraft (F-35A) (6 fighters: ¥108.4 billion*)
  * ¥30.7 billion is allocated separately for other related expenses (ground support equipment, etc.), of which ¥2.1 billion is allocated as expenses necessary for building up regional depot capabilities in the Asia-Pacific region.

- Upgrade of fighter aircraft (¥3.1 billion)
  Upgrade capabilities of existing fighters to adapt to the modernization of the aerial combat capabilities of neighboring countries and to appropriately carry out air defense missions.
  - Improvement of air-to-air combat capability of fighter aircraft (F-2) (9 fighters).
  - Upgrade of fighter aircraft (F-2) by equipping JDCS (F) (4 fighters).
  *JDCS (F) (Japan self defense force Digital Communication System (for fighters))
Shifting the posture of fighter squadrons, etc.

- Shift the posture of fighter squadrons to develop readiness for ensuring air superiority, which is a prerequisite for realizing effective deterrence and responses to various situations, including strengthening of the defense posture in the southwestern region.
- Deploy two fighter squadrons at Tsuiki Air Base, and relocate the F-4 unit at Nyutabaru Air Base and the F-15 unit at Hyakuri Air Base.
- In order to enhance tactical skills of the ASDF, relocate the Tactical Fighter Training Group, which conducts research on combat maneuvers and trains relevant units, to Komatsu Air Base that is adjacent to a vast airspace.

Acquisition of new aerial refueling and transport aircraft (KC-46A) (¥23.1 billion)

Allocate cost relating to acquisition of 1 new aerial refueling and transport aircraft that will allow fighter squadrons, etc. to continuously execute various operations in the airspace surrounding Japan.

Acquisition of rescue helicopters (UH-60J) (8 helicopters: ¥35.0 billion)

- Develop posture that can adapt to the decreasing number of the ASDF UH-60J, maintain and strengthen rescue readiness, and effectively respond to various situations.
- Reduce procurement cost through bulk procurement with the MSDF SH-60K (17 aircraft), which have common parts and manufacturing processes.

Acquisition of Type-11 short-range surface-to-air missile (1 set: ¥4.0 billion)
(3) Ensure and maintain maritime supremacy

- Capability improvement for fixed-wing patrol aircraft (P-3C) (repost)
- Life extension of fixed-wing patrol aircraft (P-3C) (repost)
- Acquisition of patrol helicopters (SH-60K) (repost)
- Life extension of patrol helicopters (SH-60J) (repost)
- Construction of an Aegis-equipped destroyer (DDG) (repost)
- Life extension of destroyers (parts procurement for 5 destroyers) (repost)
- Construction of a submarine (repost)
- Life extension of submarines (life extension work for 4 submarines and parts procurement for 4 submarines) (repost)
- Acquisition of Type-12 surface-to-ship missile (1 set: ¥12.0 billion)

- Development of a maritime operation center (new building for Self Defense Fleet HQ, etc.) (¥18.9 billion)
  Develop a maritime operation center in Funakoshi District of Yokosuka in order to establish a posture for more effective and smooth response to various situations in close cooperation with GSDF, ASDF, U.S. Forces, and relevant government offices.

- Development of a Variable Depth Sonar system (¥8.5 billion)
  Develop a Variable Depth Sonar system which will serve as a new sonar system mounted on destroyers. The system with active sonar function and the Towed Array Sonar System will enable mutually coordinated searches among multiple destroyers, in order to enhance capabilities to detect and classify submarines under layer depth.
(4) Enhance rapid deployment and response capabilities

○ Acquisition of tilt-rotor aircraft (V-22) (4 aircraft: ¥44.7 billion)
  - In view of enhancing unit deployment capabilities in amphibious operations, acquire tilt-rotor aircraft that complement and strengthen the transport capabilities of transport helicopters (CH-47JA), including cruising speed and range.
  - Other related expenses related to training equipment, etc. (¥35.3 billion)

○ Acquisition of transport aircraft (C-2) (¥8.7 billion)
  In view of the decreasing number of the current transport aircraft (C-1), acquire aircraft components of a transport aircraft (C-2) with enhanced cruising range, payload, etc. that contributes to large-scale deployments.

○ Acquisition of mobile combat vehicles (36 vehicles: ¥25.2 billion)
  Strengthen rapid deployment capabilities of the basic operational units (Rapid Deployment Divisions and Rapid Deployment Brigades) by deploying mobile combat vehicles suited for transportation by aircraft and other means.

○ Acquisition of amphibious vehicles (AAV7) (11 vehicles: ¥7.8 billion)
  Acquire amphibious vehicles with excellent maritime mobility and protection ability that support units’ amphibious landing efforts on remote islands.

○ Development of amphibious operations-related units, etc. (¥10.6 billion)
  - Development of operation base for amphibious vehicle units (Sakibe).
  - Development of facilities related to the amphibious deployment brigade (provisional name) (Ainoura).

○ Deployment of an area security unit in the southwestern region (¥19.5 billion)
  Allocate expenses for development work, etc. in Amami-Oshima and acquisition of land in Miyako-Jima for the deployment of an area security unit, etc. in order to establish initial response posture for the defense of remote islands.
○ Bilateral field training exercise with U.S. Marine Corps in the U.S. (Iron Fist)
Send GSDF units to the seas in the periphery of Camp Pendleton, California, USA, in order to conduct exercises on tactical and combat capabilities necessary for operations on remote islands as well as interoperability procedures with the U.S. Marine Corps.

○ Implementation of SDF joint exercises (command post exercises)
Conduct command post exercises to improve the effectiveness of various plans for the defense of Japan.

○ Implementation of joint exercises in Japan
Conduct field training exercises, such as amphibious landing exercises, in the islands in southwestern region, etc. to improve the SDF’s joint operation capabilities for amphibious operations.

○ Implementation of Japan-U.S. bilateral joint exercises (field training exercises)
Conduct field training exercises in maritime and aerial operations, base security, rapid deployment of units, etc. in the seas and airspace surrounding Japan and at bases in order to smoothly execute Japan-U.S. bilateral responses for the defense of Japan.

○ Preparation for the establishment of the Ground Central Command (provisional name)
Allocate related project expenses for the establishment of a unified HQ contributing to enhancing the GSDF’s nationwide operation posture.
  - Develop office buildings, etc. for the Ground Central Command (provisional name) HQ (Asaka). (¥9.2 billion)

○ Upgrade of MSDF Osumi-class LST (¥1.2 billion)
  - Upgrade MSDF Osumi-class LST to enhance transport capability for amphibious operations.
  - Acquire parts for upgrades and conduct upgrades necessary for strengthening the opening/closing mechanism of the stern gate which amphibious vehicles pass through and the LST’s water pouring/discharging function.
(5) Strengthen the infrastructure for C3I capabilities

- Strengthening of information and communications capability, which is a prerequisite for supporting nation-wide operations
  Gradually introduce cloud technology to integrate the command systems that had been developed individually by each SDF service. The integration will increase the system’s operational flexibility and resiliency, and at the same time, reduce the costs associated with development and maintenance of the system.
  - Technical assistance to build MOD Cloud. (¥100 million)
  - Overall design of cloud technology. (¥600 million)
  - Research on security measures for cloud environment. (¥80 million)

- Introduction of Tactical Data Link (TDL) capability into the GSDF to establish collaborative posture for anti-ship combat with the MSDF, ASDF, and U.S. Forces
  - Development of Tactical Data Link (TDL) interface unit (Tactical Data Distribution system (TDS) terminals). (1 set: ¥400 million)
    Allocate expenses for acquiring TDS terminals that are linked to the GSDF surface-to-ship missile (SSM) system, in order to share highly real-time target information and other tactical information among the GSDF, MSDF, ASDF, and the U.S. Forces.
  - Technical assistance service for Tactical Data Link (TDL) interface unit. (¥100 million)
    Allocate service expenses to receive specialized technical assistance on system design and program management necessary to introduce a TDL capability.

- Development of a GSDF network management system (¥200 million)
  In light of the establishment of the Ground Central Command (provisional name), develop a posture that supports operations through centralized monitoring by GSDF communication network.
3. Respond to ballistic missile attacks

Strengthen postures to protect Japan from ballistic missile attacks in multi-layered and sustainable manners. In addition to ballistic missile attacks, simultaneously build posture to respond to attacks by guerillas and special operations forces.

BMD-related budget: ¥219.3 billion

(1) Respond to ballistic missile attacks

○ Construction of an Aegis-equipped destroyer (DDG) (repost)

○ Upgrade of the capability of Aegis-equipped destroyers (2 destroyers: ¥7.7 billion)
  Continue upgrading two Atago-class destroyers with ballistic missile defense capability, which started in FY2012.

Atago-class destroyer “Atago”

○ Japan-U.S. cooperative development of Advanced Ballistic Missile Interceptor (SM-3 Block IIA) (¥1.5 billion)
  To improve capabilities against ballistic missile attacks, Japan and the U.S. will continue their cooperative development of an Advanced Ballistic Missile Interceptor (SM-3 Block IIA) to be deployed on Aegis-equipped destroyers, and prepare to establish co-production capability.

Conceptual image of operation of the Advanced Ballistic Missile Interceptor (SM-3 Block IIA)

○ Recertification of PAC-3 missiles (¥6.5 billion)
  Replace parts close to the end of their service life and inspect the entire missiles to secure required PAC-3 missiles.

○ Development of infrastructure for PAC-3 units deployment to Ichigaya Base (¥900 million)
  • Based on the past PAC-3 units deployment status, develop infrastructure for deployment to Ichigaya Base.
  • Establish Ichigaya Dispatch Section (provisional name), 1st Fire Unit (Narashino).

○ Conversion of fixed warning and control radar (FPS-7) and addition of functions for BMD response (repost)
(2) Enhancement of air and missile defense

Research on the architectures of a future integrated air defense system (¥30 million)
Work out and assess architectures for integrating the SDF’s air defense and missile defense systems on technical grounds, in order to explore the most effective and efficient integrated air and missile defense (IAMD) system for the future.

(3) Respond to attacks by guerillas and special operations forces

○ Acquisition of mobile combat vehicles (repost)

○ Response to NBC weapon attacks
  ● Acquisition of decontamination equipment. (7 sets: ¥600 million)
  Strengthen various decontamination capabilities to ensure prompt response to contamination of a large number of personnel, equipment, etc. caused by NBC attacks in order to prevent the spread of contamination and minimize secondary contamination, etc.
  ● Acquisition of Type-2 chemical agent detectors. (78 detectors: ¥400 million)

○ Acquisition of personal equipment
  ● Acquisition of Type-89 rifles. (3,000 rifles: ¥900 million)
  ● Acquisition of armor glass. (120 sets: ¥100 million)

○ Collaborative development of new utility helicopter (¥12.9 billion)
  ● Develop a new utility helicopter for aerial mobility in various situations and for search & rescue operations during large-scale natural disasters, etc. to succeed the existing helicopter (UH-1J).
  ● Reduce MOD’s helicopter development expenses by developing a common platform for SDF aircraft and civil aircraft, which shall be achieved by upgrading existing civil aircraft through the collaboration of domestic and foreign companies.

Decontamination equipment (decontamination apparatus I)

Decontamination equipment (decontamination vehicle)

Utility helicopter (image)
4. Response in outer space

Strengthen information gathering capabilities and command, control, and communication capabilities by using satellites, and implement measures to secure stable use of outer space.

**Space-related budget: ¥26.4 billion***

*Excludes the budget of BMD (space-related programs)

**Promotion of space programs**

○ Efforts related to space surveillance programs (¥200 million)
  - Design total system structure for the space surveillance system. (¥200 million)
    Design total system structure, such as interface among various assets, of space surveillance system, which is necessary for space situational awareness based on Japan-U.S. cooperation.
  - Strengthen the basis for the development of the space surveillance system.

○ Use of satellite communication (¥14.5 billion)
  - Contract support for the development of X-band defense communication satellite-3 (which is the successor satellite of Superbird C2).
  - Modification of equipment, etc. to correspond with X-band communication satellite.
  - Renting of communication satellite channel, maintenance of satellite communication related equipment.

○ Use of commercial imagery satellite and meteorological satellite information (¥11.6 billion)
  - Acquire data for image analysis (WorldView-4).
  - Conduct empirical study on the use of JAXA Advanced Land Observing Satellite-2 (ALOS-2) and small Earth observation satellite (ASNARO-1) developed by the Ministry of Economy, Trade and Industry.

○ Research for the enhancement of C4ISR* capabilities through the use of outer space (¥40 million)
  - Research on the methodologies for analyzing infrared satellite images. (¥30 million)
    * C4ISR: Command, Control, Communication, Computer, Intelligence, Surveillance, and Reconnaissance

○ Dispatch of personnel to the U.S. Air Force Space Operations Course (¥9 million)

*Budget of BMD space-related programs (¥191.5 billion)
5. Response in cyberspace

In order to ensure sufficient cybersecurity against cyber attacks at all times, develop necessary readiness, including strengthening information gathering and research and analysis capabilities, and grasp the latest risks and technological trends pertaining to cybersecurity through collaboration with allies, etc.

Cyber-related budget: ¥17.5 billion

(1) Enhance information gathering, research and analysis capabilities

- Development of security and analysis device for cyber defense (¥3.0 billion)
  Update equipment and improve functions such as virus analysis capabilities to address increasingly sophisticated and complicated cyber attack methods.

- Enhance information gathering capabilities on cyber attacks (¥400 million)
  Strengthen capabilities that detect and analyze signs of cyber attacks to contribute to responding cyber attacks.

- Research on security measures for cloud environment (repost)
  Study the most up-to-date technological trends and establish benchmarks for security measures in order to ensure the cybersecurity of the systems using cloud computing.

- Increase the number of analysts in the Cyber Defense Group

- Dispatch of liaison officer to the U.S. Army Cyber Center of Excellence (¥7 million)
  Dispatch liaison officer to the U.S. Army Cyber Center of Excellence as well as gather information at Cyber Command.

(2) Improvement/enhancement of operational infrastructure

- Maintenance of network monitoring devices (¥6.1 billion)
  Maintain monitoring devices installed at each base of the Defense Information Infrastructure (DII) in order to maintain capabilities to grasp such situations as cyber attacks and to maintain response capabilities for when cyber attacks occur, including damage minimization and prompt restoration of affected networks.
6. Respond to large-scale disasters

Swiftly transport and deploy sufficiently sized units in the event of the occurrence of various disasters, and develop response readiness that can be sustained over a long-term through establishing a rotating staffing posture based on a joint operational approach.

(1) Maintenance/enhancement of function of military camps/bases to serve as hubs for disaster response

- Promotion of seismic retrofitting, etc. to maintain and enhance functions in a time of disaster (¥13.0 billion)

- Development of a disaster response hub in Miho Base (¥3.6 billion)
  Allocate related construction expenses, etc. in order to enhance capabilities to respond to large-scale disasters in the coastal area, etc. of the Sea of Japan.

- Basic concept study for development of SDF deployment facilities (Fukui and Nara) (¥8 million)
  Allocate expenses for a basic concept study to secure SDF deployment facilities to serve as wide-area disaster response hubs from the perspective of establishing an effective system to handle large-scale disasters.

(2) Implementation of exercises, etc. to respond to large-scale and unconventional disasters

- Joint disaster drills on remote islands (RIDEX)
  Implement drills to maintain and enhance capabilities to ensure smooth joint disaster response operations against sudden disasters on remote islands.

- SDF Joint Exercise for Rescue (JXR)
  Implement SDF Joint Exercise for Rescue to maintain and improve the SDF’s joint operation capabilities to respond to large-scale disasters, in order to minimize damage through smooth and effective responses in the event of a Nankai Trough Great Earthquake.

- Joint Disaster Response Exercise with U.S. Forces (TREX)
  Implement Joint Disaster Response Exercise with U.S. Forces to establish procedures on coordination with the U.S. Forces in Japan in the event of a Nankai Trough Great Earthquake, and to maintain and enhance the capability to respond to earthquake disasters.

- Various disaster response drills
(3) Acquisition, etc. of equipment contributing to disaster response

○ Acquisition of tilt-rotor aircraft (V-22) (repost)

○ Acquisition of amphibious vehicles (AAV7) (repost)

○ Acquisition of Field Medical Surgery System (1 set: ¥300 million)

○ Acquisition of patrol helicopters (SH-60K) (repost)

○ Upgrade of MSDF Osumi-class LST (repost)

○ Acquisition of rescue helicopters (UH-60J) (repost)

○ Acquisition of a transport aircraft (C-2) (repost)

Enhancement of capabilities necessary to respond to Nuclear, Biological, and Chemical (NBC) weapons

○ Detection/identification of contaminated substances
  Acquisition of NBC Alarms. (1 set: ¥200 million)

○ Protection from contaminated substances
  Acquisition of personal protection equipment. (6,000 sets: ¥1.2 billion)

○ Decontamination of contaminated substances
  Acquisition of decontamination equipment. (repost)
7. Strengthen intelligence capabilities

Strengthen the MOD’s system for intelligence collection, processing information, and analyzing and sharing the collected information, in order that the MOD can promptly detect and swiftly respond to warnings of various situations in areas surrounding Japan and take measures based on medium-to-long-term military trends.

**Enhancement of intelligence gathering and analysis structures in the light of the terrorist incident regarding the murder of Japanese in Syria, etc.**

- Enhancement of Defense Attaché network
  - Additional dispatch of Defense Attachés to Jordan, UAE and Mongolia.
  - Strengthen support arrangements for Defense Attachés.
  - Enhance trainings for Defense Attaché candidates. (¥40 million)

- Reinforcement of intelligence gathering and analysis capabilities
  Establish necessary arrangements at the Defense Intelligence Headquarters (DIH), etc. to boost intelligence gathering and analysis capabilities related to international terrorism and public information.

**Strengthen the system for intelligence collection, processing information, and analyzing and sharing the collected information to respond timely and appropriately to various situations**

- Acquire data for image analysis (WorldView-4) (repost)
  Adopt WorldView-4 to serve as the MOD’s principal optical satellite in FY2016 and onwards, and establish continuous imaging priority in the surrounding area.

- Participation in multilateral high resolution altitude data exchange programs for strengthening GEOINT capabilities (¥40 million)
  To strengthen capabilities in sophisticated analyses that utilize geospatial intelligence (GEOINT), the MOD will participate in multilateral high resolution altitude data exchange programs and develop the necessary mechanisms.

- Acquisition of part of Unmanned Aerial Vehicle (Global Hawk) System (repost)
Support stabilization of the Asia-Pacific region and improvement of the global security environment

In order to ensure the stability of the Asia-Pacific region, Japan will enhance bilateral and multilateral cooperative relationships and conduct various activities including training and exercises in a timely and appropriate manner, as well as actively engage in international peace cooperation efforts to properly address global security challenges.

1. Measures to stabilize the Asia-Pacific region

○ Promotion of capacity building assistance to militaries, focusing on Southeast Asian countries
  Support for capacity enhancement and human resource development in the fields of humanitarian assistance and disaster relief for militaries in relevant countries.

○ Promotion of bilateral, trilateral and multilateral defense cooperation and exchanges, including with Australia, ROK and India, as well as trilateral Japan-U.S.-Australia and Japan-U.S.-ROK defense cooperation.

○ Promotion of defense exchanges and cooperation with China and Russia, including the operation of the “Maritime and Air Communications Mechanism” between Japan-China defense authorities.

○ Initiatives under the ASEAN Defense Ministers’ Meeting-Plus (ADMM-Plus)
  Active promotion of enhancing regional defense and security cooperation through ADMM-Plus, the only official defense ministers’ meeting in the Asia-Pacific region.

○ Participation in Pacific Partnership (PP) 2016
  Visit countries in the Asia-Pacific region to provide medical services, facilities maintenance and repair services, and conduct cultural exchanges, etc. Through cooperation with governments, militaries, international organizations and NGOs, the PP strengthens partnerships among participating countries and facilitates international disaster relief operations.
2. Appropriately respond to improve global security environments

Enhancement of capability to conduct overseas activities

○ Implementation of exercises in transportation of Japanese nationals overseas, etc.
In light of the recent situation in the Middle East and Africa, implement joint exercises to enhance integrated operation capability to transport Japanese nationals overseas, etc.

○ Acquisition of transport protection vehicles (4 units: ¥900 million)
Acquire transport protection vehicles with high protection capabilities in order to protect Japanese nationals being transported and SDF personnel engaged in the transportation of Japanese nationals overseas, etc. from the threat of improvised explosive devices (IED), etc.

○ Participation in multilateral exercises
Participate in multilateral exercises, such as Cobra Gold, in order to enhance capabilities related to international peace cooperation efforts.

International cooperation with UN and partners in the areas of strength

○ Dispatching instructors to PKO Centers in Africa, etc.
The SDF dispatches personnel as instructors in order to educate PKO personnel mainly in African countries to help improve their own peacekeeping capabilities and to maintain stability in the region.

○ Defense cooperation in the area of peace operations
Japan and Jordan mutually dispatch instructors as defense cooperation with the PKO Center in Jordan in the area of peace operations.

○ Dispatching instructors, etc. to projects to support rapid deployment of engineering corps in Africa
Contribute to rapid deployment of engineering corps for UN peacekeeping operations in Africa by dispatching SDF personnel, etc. to train engineering corps personnel of African countries in the use of heavy machinery.

○ Provide support to enhance disaster response capabilities of the Djiboutian Forces
Provide support to enhance disaster response capabilities of the Djiboutian Forces by the strong request of the Djiboutian government and promote mutual understanding and confidence building with the Republic of Djibouti centering on stronger ties between defense authorities, thus contributing to the development and peace in Africa.

Ensuring maritime security

○ Counter-piracy operations off the coast of Somalia and in the Gulf of Aden
- Continue counter-piracy operations by destroyers and P-3Cs off the coast of Somalia and in the Gulf of Aden.
- Air transport support using C-130H and KC-767.
- Carry out activities in Combined Task Force 151 (CTF151), a multinational counter-piracy task force.
While maintaining the deterrence of U.S. Forces, Japan will steadily implement specific measures including the realignment of U.S. Forces in Japan to mitigate the impact on local communities, including those in Okinawa.

**1. Measures for mitigating the impact on local communities**

In order to secure high-quality human resources (SDF personnel, SDF reserve personnel) in charge of national defense while enhancing their strength, the MOD will comprehensively review and appropriately implement necessary measures for recruitment and reemployment of SDF personnel and securing of SDF reserve personnel as well as promote measures to support further engagement of female personnel.

1. Promote measures to secure high-quality human resources in charge of national defense

(1) Enhancement of recruitment programs

Improvement/enhancement of SDF recruitment functions. (¥200 million)

- Enhancement of convenience for applicants via the Internet
  Development of a system enabling the acceptance of applications for recruitment examinations for SDF personnel, etc. via the Internet.

- Appropriate information transmission and improve and enhance public relations for recruitment to meet the trend of the times

(2) Improvement/enhancement of reemployment support programs

Cost related to job training (outsourcing) for SDF personnel planning to Retire. (¥600 million)

- Satisfy the education programs on disaster/crisis control
- Expand the training outsourcing
  (Set up the basic course for operation managers)

(3) Seeking fulfillment of SDF reserve personnel, etc.

- Implement the certification system for companies-supporting SDF reserve personnel, etc. (¥10 million)

(4) Others

- Promotion of measures to prevent “power harassment” and improve the work environment.
2. Promote measures to support further engagement of female personnel

Further expand recruitment and promotion of female personnel while implementing initiatives to integrally promote work-life balance.

(1) Improving work-life balance (¥200 million)

- Establishment/improvement of child-care facilities on SDF premises (¥200 million)
  Develop child-care facilities on premises suitable for special work shifts of SDF so that personnel raising children can engage in their duties without concern.
  - Newly establish child-care facilities, etc. (Ichigaya district, ASDF Fuchu Air Base, ASDF Hamamatsu Air Base)
  - Provide furniture, fixture and supplies to existing child-care facilities in SDF buildings.

- Provision of furniture/fixture for emergency call support (temporarily looking after children) (¥20 million)
  - Provide furniture/fixtures such as safety mats and baby beds to support emergency call. (6 sites).
  - Implement emergency call support drills.
  - Participate in courses designed to improve child-care skills in emergency call support. (MSDF).

(2) Implementation of training and drills, etc. for raising awareness (¥20 million)

Contribute to eliminating the conventional mindset about gender roles in the workplace and developing the work environment that enables all personnel, including those under time pressure due to child-care and nursing care, etc. to demonstrate their full potential.
(3) Promotion of female personnel engagement in international cooperation, etc. (¥3 million)

- Exchanges with servicewomen from other countries (a symposium on the further engagement of female personnel)
  Hold a symposium joined by servicewomen from other countries undertaking advanced initiatives for the further engagement of female personnel.

- Development of gender advisers
  Send SDF personnel to “Gender Field Advisor Course” (sponsored by the Swedish Armed Forces) in order to introduce the perspective of eliminating gender (*) disparity in international peace cooperation efforts, etc.
  * Gender: Distinction between men and women formed historically, socially and culturally, such as “male image” and “female image,” instead of sex that shows the biological difference between males and females

(4) Improvement of the working environment for female SDF personnel (¥ 900 million)

- Building facilities for female SDF personnel
  - Build accommodation sections and related facilities for female SDF personnel aboard Aegis-equipped destroyers (DDGs) (MSDF).
  - Refurbish buildings for female SDF personnel training units, etc. (GSDF Camps Asaka and Soumagahara, ASDF Ashiya Air Base).
  - Build lodgings in the exercise fields utilized as bases during disaster relief operations, etc. (GSDF Camps Omura).
  - Develop spaces for women (night duty rooms, nap rooms, etc.) (ASDF).

- Development of mentors
  Improve advisory and guidance skills of senior personnel (mentors) being consulted by junior personnel.

- Development of telework terminals

- Invite outsourced counselors for female SDF personnel, etc.

(5) Strengthen structures to support further engagement of female personnel

- Establishment of the Office of Promotion and Planning of the Work-Life Balance (provisional name) within the Personnel Affairs Division, Bureau of Personnel and Education
  Strengthen organization-wide initiatives to promote further engagement of female personnel in order to respond to the diverse missions required of the SDF.

- Develop structures required to promote further engagement of female personnel at Ground, Maritime and Air Staff Offices, etc.

(6) Other (¥40 million)

- Promotion of measures to prevent sexual harassment, etc.

3. Personnel management system reform

Given that equipment has become more advanced and complex, and missions more diverse and internationalized in recent years, the SDF will steadily implement measures to reform the personnel management system, in order to ensure the strength of its units and the effective use of human resources amid a severe fiscal situation, taking into consideration a variety of elements, including skills, experience, physical strength and morale.
Streamlining initiatives

Various initiatives will be promoted to further rationalize and streamline overall equipment acquisitions, seeking to save approx. ¥150.0 billion in FY2016 and onwards.

1. **Procurement of equipment, etc. and services using long-term contracts**
   
   [Expected reduction : approx. ¥14.8 billion]

   Pursue procurement cost reduction and stable procurement by using long-term contracts over 5 years.

   ○ Bulk procurement of 17 patrol helicopters (SH-60K) using long-term contract (6-year procurement)
     (Expected reduction : ¥11.4 billion or 10.0%)

     |---------|---------|---------|---------|---------|---------|
     | Conclusion of contract | | Delivery of 5 aircraft | Conclusion of contract | Delivery of 6 aircraft |
     | Conclusion of contract | Delivery of 6 aircraft | Conclusion of contract | |

     Total: ¥114.0 billion
     Reduction: ¥11.4 billion (Minus 10.0%)

   ※ Total of ¥15.1 billion reduction is expected by packaging bulk procurement of 17 MSDF patrol helicopters (SH-60K) under long-term contract, along with bulk purchase of 8 ASDF rescue helicopters (UH-60J) which have common manufacturing processes, etc.

     - Long-term contract of Performance Based Logistics (PBL) in order to improve operational availability and ensure timely and adequate parts supply posture, etc.
       - Special transport helicopter (EC-225LP) (6-year procurement)
         (Expected reduction : ¥1.6 billion or 26.2%)
       - Helicopter trainer (TH-135) (6-year procurement)
         (Expected reduction : ¥1.9 billion or 23.2%)
2. Review of maintenance methods [Expected reduction: ¥43.2 billion]
Streamline maintenance costs by extending periodic maintenance intervals.

[Example]
○ PBL of components for attack helicopter (AH-64D) (for 3 years)
  (Expected reduction: ¥6.4 billion)

3. Bulk purchase of equipment [Expected reduction: ¥46.5 billion]
Streamline budget costs by reviewing equipment with high prices due to small-lot and long-term purchases and by concentrating budget for them in a single fiscal year if cost savings can be expected.

[Examples]
○ Bulk purchase of ship-to-air guided missiles (standard missile SM-2)
  For 3 years: ¥87.3 billion → ¥56.0 billion
  (Expected reduction: ¥31.2 billion)

○ Packaged modification of support equipment (AIS) for fighter aircraft (F-15)
  3 units: ¥7.8 billion → ¥6.1 billion
  (Expected reduction: ¥1.7 billion)

○ Bulk purchase of rescue helicopter (UH-60J)
  8 aircraft: ¥38.7 billion → ¥35.0 billion
  (Expected reduction: ¥3.7 billion)

4. Use of civilian goods and review of specifications
[Expected reduction: ¥45.5 billion]
Pursue cost savings by using civilian goods and reviewing specifications of equipment with regard to cost effectiveness.

[Examples]
○ Use of civilian goods for network operations support equipment
  (for TDS, JDCS)
  (Expected reduction: ¥2.9 billion)

○ Review of specifications while maintenance of Tactical Network Control System (TNCS)
  (Expected reduction: ¥12.4 billion)
1. Restructuring and organizational quota changes

Implement unit reorganization programs in order to conduct effective deterrence and response to various situations.

○ Establishment of the Amphibious Rapid Deployment Training Unit (provisional name)

○ Establishment of the 3rd Engineering Brigade (provisional name)

○ Request for increase in the number of SDF personnel
  Increase the number of SDF personnel to upgrade and strengthen capabilities to carry out surveillance and to take effective actions in the southwestern region in order to improve the ability to quickly respond to various situations.

<table>
<thead>
<tr>
<th>Request for increase in the number of personnel</th>
<th>GSDF</th>
<th>MSDF</th>
<th>ASDF</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>+40</td>
<td>+77</td>
<td>+79</td>
<td>+196</td>
<td></td>
</tr>
</tbody>
</table>

* Excluding changes in the number due to the revised quota of SDF personnel

○ Organizational quota changes
  - Establishment of the Defense Councilor for Information Security and Informatization (provisional name) within the Minister’s Secretariat to organize information security structure and informatization promotion structure, etc.
  - Reorganization of the Ground Staff Office (Reorganization of the Personnel Department into the Personnel and Education Department [provisional name], etc.).
  - Establishment of the Human Resources Development and Personnel Affairs Section (provisional name), General Affairs Department, Joint Staff Office.
  - Establishment of the Medical Safety and Infection Control Department (provisional name) at the National Defense Medical College Hospital to enhance the ability to cope with infectious diseases.
  - Establishment of the Senior Coordinator for Japan-U.S. Alliance Coordination (provisional name) within the Japan-U.S. Defense Cooperation Division, Bureau of Defense Policy to strengthen Japan-U.S. defense cooperation structure.
  - Establishment of the Airworthiness Group (provisional name) within the Department of Project Management, Acquisition, Technology & Logistics Agency to strengthen management structure of aircraft safety, including the aircraft being transferred overseas.
2. Promote measures for SDF bases

Japan will steadily implement measures to achieve harmony between defense facilities and neighboring communities, as well as measures to facilitate the smooth and effective stationing of U.S. Forces in Japan.

(1) Expenses related to programs for communities near bases

<table>
<thead>
<tr>
<th>Expenses for prevention of disturbances resulting from SDF activities or the establishment and operations of defense facilities</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Implementation of sound insulation projects for residences near air bases, etc.</td>
</tr>
<tr>
<td>2. Implementation of projects to improve the living environment of neighboring communities (river and road restoration, sound-proofing systems in schools, improvement of public welfare facilities, etc.).</td>
</tr>
<tr>
<td>3. Implementation of projects covered by specified defense facilities environment improvement adjustment grants, with strong requests from municipalities around bases (development of public facilities and so-called soft projects, such as medical cost subsidies, etc.).</td>
</tr>
</tbody>
</table>

![Example of residential sound insulation]

- **Installation of sound-proof fittings**
- **Installation of sound-proof window**
- **Renovated into sound-proof ceiling**
- **Renovated into sound-proof wall**

(2) Cost-sharing for the stationing of U.S. Forces in Japan

<table>
<thead>
<tr>
<th>Expenses of the Special Measures Agreement to ensure the smooth and effective stationing of U.S. Forces in Japan</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Share the cost of wages of USFJ employees and cost of utilities used at USFJ facilities.</td>
</tr>
<tr>
<td>2. Improve facilities (maintenance hangars, barracks, etc.).</td>
</tr>
<tr>
<td>3. Share the cost of social insurance premiums by the employer (healthcare insurance, welfare annuity insurance, etc.) for USFJ employees.</td>
</tr>
</tbody>
</table>

![Maintenance hangar]

<table>
<thead>
<tr>
<th>Cost-sharing for the stationing of U.S. Forces in Japan</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>¥193.3 billion</strong> (Expenditure base: <strong>¥192.0 billion</strong>)</td>
</tr>
</tbody>
</table>

- **Special Measures Agreement**: ¥145.0 billion
- **Facilities improvements**: ¥21.8 billion
- **USFJ employee measures, etc.**: ¥26.4 billion

(3) Rental cost of facilities, compensation expenses, etc.

- **¥137.6 billion**

- Rental cost of defense facility land, etc., compensation for the loss of fishermen’s income due to training on water areas, etc.
3. Strengthen education and research systems

Implement measures to strengthen education and research systems at the National Institute for Defense Studies, the National Defense Academy and the National Defense Medical College, as well as develop an environment enabling personnel to devote themselves to their duties.

(1) The National Institute for Defense Studies

○ Strengthen coordination with domestic universities
  Create graduate school coordination programs with domestic universities to contribute to strengthen the intellectual foundation and upgrade education for developing senior officials.

○ Strengthen the system of research study
  Establish the China Studies Office (provisional name) to enhance the structure of research concerning China’s military and security issues.

○ Enhance international research exchanges
  • Participate in the Halifax International Security Forum (HISF), etc.
  • Participate in an international conference on China’s military and security developments, hosted by the Institute for National Strategic Studies (INSS) of the U.S. National Defense University.
  • Promote exchanges of opinions with government officials and major research institutions in other countries with respect to “East Asian Strategic Review” and “NIDS China Security Report,” etc.

(2) The National Defense Academy

○ Develop the education and research system
  • Establish the Global Security Center (provisional name) as a hub for promoting research from interdisciplinary and global viewpoints as well as research based on mutual partnership and coordination with educational and research institutes at home and abroad on security issues.
  • Increase the number of teaching staff to further develop the education system of the National Defense Academy.

(3) The National Defense Medical College

○ Strengthen the functions of the college as a hub for education and research in the field of military medicine
  • Develop clinical skills laboratories, etc. (¥30 million).
  • Conduct advanced research on military medicine. (¥100 million)

○ Improvement/enhancement of clinical systems
  Increase the number of staff of the National Defense Medical College Hospital to cope with medical care for Type I infectious diseases and strengthen medical safety and infection control.
4. Strengthen health functions

Promote initiatives for upgrading SDF hospitals to hubs with enhanced functions and establish an efficient and high-quality medical care system, including improved management of the National Defense Medical College Hospital, etc. In addition, greater emphasis will be placed on securing and development of medical officers, nurses and emergency medical technicians. Furthermore, strive to enhance frontline first aid capabilities and develop postures for rapid evacuation of the injured personnel.

- Initiatives toward upgrading SDF hospitals to hubs with enhanced functions
  - Steadily promote development of a core hospital in each district and hospitals with special functions including education of international activities, submarine medicine and aviation medicine.
  - Design, etc. for construction of Iruma Hospital (provisional name). (¥200 million)
  - Development toward the conversion of JSDF Central Hospital’s medical care information system, etc. (¥50 million)

- Improve frontline first aid capabilities in response to emergency events
  - Consider matters regarding frontline first aid actions in response to emergency events. (¥2 million)
  - Survey on frontline first aid actions and necessary education and training, etc., in foreign military forces.

- Enhance capabilities in response to infectious diseases
  - Develop a structure for enhancing capabilities in response to infectious diseases.
  - Develop human resources specialized in infectious diseases. (¥2 million)
  - Build facilities and procure equipment for development of structure for treatment of patients with Type I infectious diseases at the National Defense Medical College Hospital and JSDF Central Hospital. (¥20 million)
  - Increase the number of staff of the National Defense Medical College Hospital to cope with medical care for Type I infectious diseases and strengthen medical safety and infection control. (repost)

- Initiatives contributing to smooth activities of SDF in the southwestern region
  - Survey on the SDF medical care system in Okinawa Prefecture. (¥3 million)
5. Promote research and development

In line with the Strategy on Defense Production and Technological Bases, take a variety of measures, including formulation of a research and development vision for securing technological advantages in strategically important areas, and promote important research and development.

Research matching needs relevant to SDF operations

○ Research of the long-range naval gun ammunition technology, enabling out-ranged, precision fire support (¥2.2 billion)
  Conduct a research of long-range naval gun ammunition, applied rocket-assist, and trajectory correction technology, in order to enable precision land attack from outside the enemy threat zone, and secure our naval vessel from enemy attack, simultaneously.

Advanced research to secure technological advantages in strategically important areas

○ Research on night-vision sensor technologies that contributes to upgrading target identification capability and night task capability (¥1.7 billion)
  Conduct advanced research on night-vision sensor technologies mounted on unmanned aerial vehicles, ground vehicles and various other vehicles as well as on diverse equipment, etc. that is expected to upgrade target identification capability and night task capability through integrated processing of two night-vision sensor images—obtained from near-infrared night-vision sensors that can take near-daytime pictures even in the field environment without moonlight and from middle-infrared night-vision sensors that can take pictures of faraway heat sources.

Research on night-vision sensor technologies that contributes to upgrading target identification capability and night task capability (image)
Promote research related to dual-use technology also applicable to natural disasters

○ Research on environment recognition enhancement technology through integration of information from multiple vehicles, etc. (¥500 million)
Conduct research on systematization into remotely-driven vehicles of advanced environment recognition technology (*1) that enables swift recovery and restoration work in places dangerous for manned work, such as the CBRN (*2) environments, etc. in the wake of large-scale natural disasters, etc.
*1 Technology to make it possible to speed up a variety of work, such as route opening, by integrating topographical information, etc. obtained by sensors of multiple vehicles
*2 CBRN: Chemical, Biological, Radiological and Nuclear

Discovery and cultivation of advanced and innovative technologies

○ Innovative Science & Technology Initiative for Security (¥600 million)
Further promote the funding program (competitive funds*) to discover ingenious research by universities, IAA research institutes and companies, etc., which may be applicable to defense equipment, thereby promoting promising seed research (including the solicitation of new research projects).
* Research & development funds to be distributed to researchers or other relevant entities under a scheme where the fund distruber (the Ministry of Defense) widely solicits R&D projects and adopts projects to be implemented from among the proposed projects based on the evaluation by experts and others focusing on scientific and technological viewpoints.

Research on environment recognition enhancement technology through integration of information from multiple vehicles, etc. (image)

</table>

Note 1: The procurement amount for FY2015 indicates the number that was envisioned in the original budget.

Note 2: Price represents amounts, excluding non-recurring costs, needed for the production of equipment. The non-recurring costs are indicated in parentheses in the amount column (external value).

Note 3: “Number procured” indicates the number newly contracted in FY2016. (The period for acquiring the item varies by equipment, but can take between two to five years.)

Note 4: The number in brackets represents the number related to upgrading the existing commissioned equipment.

Note 5: Regarding the procurement for the capability improvement of radars mounted on fixed-wing patrol aircraft (P-3C), capability improvement of infrared detection system on fixed-wing patrol aircraft (P-3C), improvement of air-to-air combat capability of fighter aircraft (F-2), improvement in capability of Airborne Warning And Control Systems (AWACS) (E-767), addition of aerial refueling function to transport aircraft, capability improvement of short-range SAM system on Takanami-class destroyer, aircraft (C-130H) modernization of destroyer CIWS (high-performance 20mm autocannon), improvement in anti-submarine capability of Atago-class destroyer (MFTA), improvement in anti-submarine capability of Akizuki-class destroyer, etc. (multistatic), modernization of command system of Asagiri-class destroyer, modernization of command system of Takanami-class destroyer, modernization of command system of Oyashio-class submarine, and improvement in capability of Osumi-class LST, the upper figure represents the procurement of modification and work services for the existing commissioned equipment, while the lower figure represents the number of parts, etc. necessary for the capability improvement. One set to be procured for improvement in the capability of Airborne Warning And Control Systems (E-767) in FY2016 indicates a portion of the parts, etc. necessary for improving the capabilities of four aircraft. Regarding the volume of procurement for the service life extension of vessels, the upper figure represents the number of ships subject to service life extension work and the lower figure represents the number of parts procured for service life extension work.

Note 6: Regarding transport aircraft (C-2), the price for airframe component to be acquired is shown. Regarding new aerial refueling and transport aircraft, the cost related to acquisition of 1 aircraft is shown.

Note 7: Regarding Unmanned Aerial Vehicle (Global Hawk) System, the price for airframe components (for 3 UAVs) is shown.

Note 8: The number of procurements for the upgrade of the capability of Aegis-equipped destroyers represents the number of procurements for upgrading two Atago-class destroyers with Ballistic Missile Defense (BMD) capability, which started in FY2012.
## 2. Major research and development programs

<table>
<thead>
<tr>
<th>Item</th>
<th>Overview</th>
<th>FY2016 Amount (¥100 million)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Development of a Variable Depth Sonar system</strong></td>
<td>Develop a Variable Depth Sonar system which will serve as a new sonar system mounted on destroyers. The system with active sonar function and the Towed Array Sonar System will enable mutually coordinated searches among multiple destroyers, in order to enhance capabilities to detect and classify submarines under layer depth.</td>
<td>85</td>
</tr>
<tr>
<td><strong>Research of the long-range naval gun ammunition technology, enabling out-ranged, precision fire support</strong></td>
<td>Conduct a research of long-range naval gun ammunition, applied rocket-assist, and trajectory correction technology, in order to enable precision land attack from outside the enemy threat zone, and secure our naval vessel from enemy attack, simultaneously.</td>
<td>22</td>
</tr>
<tr>
<td><strong>Research on night-vision sensor technologies that contributes to upgrading target identification capability and night task capability</strong></td>
<td>Conduct advanced research on night-vision sensor technologies mounted on unmanned aerial vehicles, ground vehicles and various other vehicles as well as on diverse equipment, etc. that is expected to upgrade target identification capability and night task capability through integrated processing of two night-vision sensor images—obtained from near-infrared night-vision sensors that can take near-daytime pictures even in the field environment without moonlight and from middle-infrared night-vision sensors that can take pictures of faraway heat sources.</td>
<td>17</td>
</tr>
<tr>
<td><strong>Research on environment recognition enhancement technology through integration of information from multiple vehicles, etc.</strong></td>
<td>Conduct research on systematization into remotely-driven vehicles of advanced environment recognition technology that enables swift recovery and restoration work in places dangerous for manned work, such as the Chemical, Biological, Radiological and Nuclear (CBRN) environment, etc. in the wake of large-scale natural disasters, etc.</td>
<td>5</td>
</tr>
<tr>
<td><strong>Development of new patrol helicopters</strong></td>
<td>Develop patrol helicopters with capabilities to detect submarines by coordinating with multiple helicopters in order to ensure superiority in anti-submarine operations in the seas surrounding Japan, including shallow seas.</td>
<td>244</td>
</tr>
<tr>
<td><strong>Joint development of new utility helicopter</strong></td>
<td>Develop a new utility helicopter for aerial mobility in various situations and for search &amp; rescue operations during large-scale natural disasters, etc. to succeed the existing helicopter (UH-1J). Reduce MOD’s helicopter development expenses by developing a common platform for SDF aircraft and civil aircraft, which shall be achieved by upgrading existing civil aircraft through the collaboration of domestic and foreign companies.</td>
<td>129</td>
</tr>
<tr>
<td><strong>Innovative Science &amp; Technology Initiative for Security</strong></td>
<td>Further promote the funding program (competitive funds) to discover ingenious research by universities, IAA research institutes and companies, etc., which may be applicable to defense equipment, thereby promoting promising seed research (including the solicitation of new research projects).</td>
<td>6</td>
</tr>

1. [: growth rate (%)
2. The figures in the top row do not include SACO-related expenses, U.S. Forces realignment-related expenses (the portion allocated for reducing the burden on local communities) and expenses for the introduction of new government aircraft. The number in parentheses in the bottom row indicates the expenses which includes those above.

The amount of the SACO-related expenses are:
FY 2015: ¥1.0 billion; FY 2016: ¥1.0 billion (provisionally kept the same as the previous FY).

The U.S. Forces realignment-related expenses (the portion allocated for reducing the burden on local communities) are:

FY 2015: ¥261.5 billion; FY 2016: ¥204.3 billion (provisionally kept the same as the previous FY).

The expenses related to the introduction of new government aircraft are ¥2.2 billion in FY 2016.

3. Details of long-term contract in FY2015: Fixed-wing patrol aircraft (P-1) X 20 aircraft
   in FY2016: Patrol helicopter (SH-60K) X 17 aircraft ¥102.0 billion
   Performance Based Logistics (PBL) of Special transportation helicopter (EC-225LP) ¥4.3 billion
   Performance Based Logistics (PBL) of Training helicopter (TH-135) ¥5.6 billion.
Composition of defense-related expenses

Expenditures: ¥4,860.7 billion
[Personnel and provisions expenses + obligatory outlay expenses + general material expenses]

(Fiscal Year)

Personnel and provisions expenses
Expenses related to personnel salary, retirement allowance, meals, etc.
¥2,147.3 billion

Material expenses
(program expenses)
Expenses related to the procurement, repair and maintenance of equipment; purchase of fuel; education and training of SDF personnel; facility construction and maintenance; utilities such as lighting, heat and water; research and development of technology; and expenses related to base measures, including measures to alleviate the burden on communities located near bases and cost-sharing for the stationing of USFJ

Obligatory outlay expenses
Expense of payments made in FY 2016 in accordance with contracts made before 2015

General material expenses
(activity expenses)
Expense of payments made in FY 2016 in accordance with contracts made before 2016

Future obligations concerning new contracts
Expenses to be paid after FY 2017 for projects requiring several years to be completed, such as procurement of major equipment like ships and aircraft, and construction of hangars and barracks, etc., based on a contract that payment shall be made sometime in the future (within five years, in principle)

Notes:
1. The figures do not include SACO-related expenses, U.S. Forces realignment-related expenses (the portion allocated for reducing the burden on local communities) and expenses for the introduction of new government aircraft.
2. This chart is a rough diagram. The length of a box does not necessarily correspond to the actual amount of expenses.
3. Future obligations concerning new contracts include expenses to be paid after FY 2021 associated with the introduction of a long-term contract for projects covered by the Public Services Reform Act and procurement of equipment, etc.
### Details and classification of material expenses (program expenses)

<table>

</tr>
</tbody>
</table>

**Expenditure base:** Total amount to be paid in the current fiscal year for projects like acquisition of equipment and facility development. Specifically, it is the sum of the expenses to be paid in FY 2016 (general material expenses) based on the contracts concluded in FY 2016 and the expenses to be paid in FY 2016 (obligatory outlay expenses) based on the contracts concluded before FY 2015. This is a useful point of view in understanding the share of defense-related expenses in the overall expenditure budget of the government, which is on a one-year budget.

**Contract base:** Total amount of contracts concluded in the current fiscal year for projects like acquisition of equipment and facility development. Specifically, the sum of the expenses to be paid in FY 2016 and the expenses to be paid after FY 2017 (future obligation pertaining to new contracts) based on the contracts concluded in FY 2016. This is a useful point of view in understanding the total amount of expenses by program with respect to year-by-year projects for developing defense power.

### Concept of Future Obligation

The build-up of defense capabilities, such as procurement of major equipment including vessels and aircraft, as well as construction of hangars and accommodations for SDF personnel, may take several fiscal years. For this reason, the Ministry of Defense makes contracts which span is several fiscal years (up to five years, in principle), and at the time of concluding the contract, makes an advance commitment to pay the expenses at a certain time in the future.

Future obligation refers to the amount which will be paid in the fiscal year or years following the year the contract is made, in accordance with the contract of several fiscal years.

(e.g.) ¥10.0 billion worth of equipment is procured under a four-year contract

- **FY 2014:** ¥10,296 million
  - Share of expenses budget: [22.0]
  - YoY change: △561
  - Expenditures that are to be expended later on: △561

- **FY 2015:** ¥10,296 million
  - Share of expenses budget: [22.0]
  - YoY change: △561
  - Expenditures that are to be expended later on: △561

- **FY 2016:** ¥10,296 million
  - Share of expenses budget: [22.0]
  - YoY change: △561
  - Expenditures that are to be expended later on: △561

**Notes:**

1. The figures do not include SACO-related expenses, U.S. Forces realignment-related expenses (the portion allocated for reducing the burden on local communities) and expenses for the introduction of new government aircraft.
2. General material expenses of FY 2013 include expenses to be transferred to the Special Account for the Reconstruction from the Great East Japan Earthquake ($88.9 billion).

Notes: U.S. Forces realignment-related expenses are ¥180.1 billion <¥277.3 billion> and broken down as follows;
(1) Measures to contribute to reduce the burden on local communities: ¥176.6 billion <¥277.1 billion>
(2) Measures to maintain deterrence: ¥3.5 billion <¥200 million>
Reference
1. Assuring Safety and Security of the People’s Lives

(1) Enhancing the disaster response capability of the Self-Defense Forces ・・・ ¥49.4 billion
Expenses for improving disaster response capability and restoration of equipment that are worn out as the result of responding to various disasters, including rainstorm caused by Typhoon 18 and heavy rain over the country.

- Acquisition of CH-47JA, UH-60JA, UH-60J
- Procurement of a rescue amphibian (US-2) (1 aircraft)
- Procurement of light armored vehicle (38 vehicles), a NBC reconnaissance vehicle (1 vehicle), and type-96 armored personnel carrier (8 vehicle)

(2) Securing stable operation posture of the Self-Defense Forces ・・・ ¥52.6 billion ※
Expenses for securing stable operation posture of SDF, such as strengthen intelligence, warning and surveillance capabilities, enhance response capabilities to various situations including terrorism, ensure availability of equipment, etc. in the time when SDF operation shows increasing trend considering an increasingly severe security environment.

- Acquisition of components of electronic devices equipped on aircraft (OP-3C and EP-3)
- Establish information gathering system

※ Includes ¥4.1 billion for counter-terrorism (expenses for acquisition of combat uniform set and personal equipment)
2. **Smooth Operation of Defense Facilities**  ⋅ ⋅ ⋅ ¥40.3 billion

Expenses for precise and prompt implementation of measures to reduce the impact on local communities in the U.S. Forces realignment-related measures

- Facility development associated with relocation of carrier air wing from Atsugi Air Facility to MCAS Iwakuni

- Demolition of Properties at Camp Zukeran (West Futenma Housing Area)

- Facility development associated with relocation of U.S. Navy Ramp at Kadena Air Base

3. **Others**  ⋅ ⋅ ⋅ ¥54.4 billion

- Additional payment for SDF personnel due to their pay revision

- Expenses to cover for foreign exchange reserve shortage caused by the depreciation of the Yen

- Restoration of equipment etc. damaged by natural disasters
