

View exchanges about Mission Engineering

Discussion with Dr. James D. Moreland Jr

JCASPSS held a discussion with Dr. Moreland in Raytheon, recognized as a world-renowned expert in Mission Engineering and Integration. Mission Engineering is said to be an approach that involves organizational transformation focused on the success of the mission, solving unit-wide integration and interoperability issues, and contributing to time advantage and faster decision making. During this view exchanges, we deepened our discussion on what organizations need to do to evolve and make this approach take root in their organizations with Air Staff Office and ATLA.

JCASPSS is aware that the concept of Mission Engineering is deeply related to organizational evolution, and we intend to work our research in this area.
