

## Koku-Jieitai hosted Civil Engineering Key Leaders Engagement with PACAF

---

From October 19 to 20, Koku-Jieitai (Japan Air Self-Defense Force) hosted Civil Engineering Key Leaders Engagement with Pacific Air Forces (PACAF/USAF) in Japan.

The purpose of this engagement is to deepen mutual understanding between Koku-Jieitai-PACAF in the field of Civil Engineering, which is a key area to support air operations.

The meeting also focused on improving bilateral damage recovery capabilities and enhance durability of facilities used by the two air forces. Improved damage recovery capabilities through bilateral collaboration particularly supports Koku-Jieitai-PACAF bilateral response capabilities and contributes to the peace and stability of this region.

Key leaders observed each rapid airfield damage repair trainings of Koku-Jieitai and USAF Civil Engineering Units so that the opinion exchange was extremely useful.

The Koku-Jieitai will continue to enhance and maintain a cooperative and trusting relationship with the PACAF in various areas, including in the field of Civil Engineering.
