Notification of products with S-type NCAGE (SCAGE) Code marking

Acquisition, Technology and Logistics Agency (ATLA) is informed that some companies are using parts, materials (ex. name plates, casting materials) and relevant drawings for the products which are marked with S-type NCAGE (SCAGE) Codes (old NCAGE Codes created for each company before Oct. 2020) to manufacture industrial products.

Using SCAGE Codes are allowed when the company decides there is an appropriate reason for difficulty in replacing SCAGE Codes to J-type NCAGE (JCAGE) Codes from economical rationality and business continuity perspective.

However, please note that the provision described above is not a permission to use SCAGE Codes permanently. When the product models are replaced by the subsequent ones, you appropriately renew the SCAGE Codes to the new NCAGE Codes which start with capital "J".
